Dealroom.co API v1

Endpoint

<https://api.dealroom.co/api/v1>

sandbox endpoint

<https://staging-api.dealroom.co/api/v1>

Authentication

For server-side apps we use HTTP Auth over ssl. To sign your request you need to provide an api key received as username. Password field can be empty or any dummy value.

Example for curl:

```
curl -u '091df29088e2db05db4f76a2e53e2aaf:' https://api.dealroom.co/api/v1/companies
```

Or for php curl:

```
curl_setopt($ch, CURLOPT_HTTPAUTH, CURLAUTH_BASIC);  
curl_setopt($ch, CURLOPT_USERPWD, '091df29088e2db05db4f76a2e53e2aaf:');
```

For client-side apps you need to set special header X-Dealroom-App-Id

Also you need to provide **X-Requested-With** header with **XMLHttpRequest** value

```
$http.get('https://api.dealroom.co/api/v1/companies', {  
  headers: {  
    'X-Dealroom-App-Id': '123123123',  
    'X-Requested-With': 'XMLHttpRequest'  
  }  
});
```

HTTP status codes

- **200** OK
- **201** Created
- **400** Bad Request (invalid query data)
- **401** Not Authorized (invalid authentication data)
- **403** Forbidden (no permissions)
- **404** Not found
- **405** Not Allowed (invalid request method)
- **500** Internal Server Error
- **503** Service Temporarily Unavailable (requests limit exceeded)

Partial response

Use query param and comma-separated list of fields, e.g.

```
?fields=id,name,tagline
```

For sub-partials we can use brackets, e.g.

```
?fields=id,name,similar(id,name)
```

Results limit

```
?limit=10&offset=10
```

Ordering

```
?sort=field // ascending  
?sort=-field // descending
```

Error messages

When http status code ≥ 400 error message will be returned.

```
{  
  "error": true,  
  "code": 404,  
  "message": "Not found"  
}
```

GET /transactions

Search for transactions (filtered query)

Parameter	Description
form_data optional string	filter's values for search Example: locations(Western%20Europe),industries(charity)
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, text_type, path, url, tagline, images(32x32, 74x74, 100x100), address, industries, hq_locations, locations, tg_locations, traffic_summary, performance, growth_stage, total_funding, total_funding_source, investors(id, name, path), last_funding(year, month, amount, amount_source, currency, round, investors, unknown_investors)
sort optional string	Options: name, date, industries, locations, growth_stage, total_funding, last_funding

GET /transactions/filters

Retrieve filters for transactions (filtered query).

When you make a companies search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

Parameter	Description
hash optional string	hash string received from /investors
form_data optional string	filter's values for search Example: locations(Western%20Europe),industries(charity)
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: industries(name, count, active), locations, hq_locations(name, count, active), growth_stages(name, count, active), fundings(name, count, active)

GET /companies/:id/similar

Retrieve similar companies for company

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, url, tagline, images(32x32, 74x74, 100x100), address, hq_locations, locations, growth_stage, performance, employees, industries, traffic(visitors, annual_growth, sources, top_countries), total_funding, total_funding_source, fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), score
limit optional integer	Default: 10
offset optional integer	
sort optional string	Options: name, locations, growth_stage

GET /companies/filters

Retrieve filters for companies (filtered query).

When you make a companies search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

24.03.17 Now you can filter or sort companies by last updated date. Also last_updated field added.

```
/companies?form_data=last_updated(2017-03-17 00:00:00)&sort=-last_updated
```

This filter has no buckets, just key and current value.

Parameter	Description
hash <small>optional</small> <small>string</small>	hash string received from /companies
form_data <small>optional</small> <small>string</small>	filter's values for search Example: locations(Western%20Europe),industries(charity)
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: client_focus(name, count, active), revenues(name, count, active), performance(name, count, active), fundings(name, count, active), industries(name, count, active), achievements(name, count, active), tags(name, count, active), locations, hq_locations(name, count, active), tg_locations(name, count, active), delivery_methods(name, count, active), growth_stages(name, count, active), company_status(name, count, active), employees(name, count, active), last_updated

POST /companies/filters

Retrieve filters for companies (bool query).

When you make a companies search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

24.03.17 Now you can filter or sort companies by last updated date. Also last_updated field added.

```
-X POST /companies
-d '{
  "form_data": {
    "must": {
      "last_updated": "2016-12-10 00:00:00"
    }
  },
  "sort": "-last_updated"
}'
```

This filter has no buckets, just key and current value.

Parameter	Description
hash <small>optional</small> <small>string</small>	hash string received from /companies
form_data <small>optional</small> <small>array</small>	filter's values for search Example: {'must': {'locations': 'Western%20Europe'}, 'should': {'industries': 'charity'}, 'must_not': {}}
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: client_focus(name, count, active), revenues(name, count, active), performance(name, count, active), fundings(name, count, active), industries(name, count, active), achievements(name, count, active), tags(name, count, active), locations, hq_locations(name, count, active), tg_locations(name, count, active), delivery_methods(name, count, active), growth_stages(name, count, active), company_status(name, count, active), employees(name, count, active), last_updated

GET /companies/:id/board_members

Get company board members

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: name, url, images(32x32, 74x74, 100x100)
limit optional integer	Default: 10
offset optional integer	

GET /companies/:id/media

Retrieve company media files

Media files types:

- **vimeo** - vimeo video
- **youtube** - youtube video
- **slideshare** - slideshare presentation
- **image** - image file
- **ppt** - ppt/pptx presentation file
- **pdf** - pdf file
- **doc** - doc/docx file
- **vimeo** - vimeo video

For video, youtube and slideshare types file field contains item ID in coincident service. image, ppt, pdf and doc types file field contains link to original file. This types do not have thumbs.

Parameter	Description
fields <div>optional<div>string</div></div>	<p>Comma-separated fields to return. Nested fields in brackets</p> <p>Example: id,name,path,images(32x32)</p> <p>Options: type, file, thumb, description</p>
limit <div>optional<div>integer</div></div>	<p>Default: 10</p>
offset <div>optional<div>integer</div></div>	

GET /companies/:id/fundings

Retrieve company funding rounds

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: year, month, amount, amount_source, currency, round, investors(id, name), unknown_investors
limit optional integer	Default: 10
offset optional integer	

GET /companies/batch

Get batch companies for ids

Parameter	Description
ids	comma-separated companies ids (int, not strings urls, 50 max)
required	
string	
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, name, path, tagline, about, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), employees, twitter_followers, industries, growth_stage, traffic_summary, performance, total_growth, hq_locations, tg_locations, client_focus, revenues, tags, delivery_method, launch_year, launch_month, total_funding, total_funding_source, last_funding, last_funding_source, company_status, facebook_likes_chart, alexa_rank_chart, twitter_tweets_chart, twitter_followers_chart, twitter_favorites_chart, growth_index_chart, app_downloads_chart, kpi_valuation, kpi_revenues, kpi_currency, achievements, team(name, title, images), board_members(name), investors(id, name, images, exited, path), fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), media(type, file, thumb, description), traffic(visitors, annual_growth, sources, top_countries), similar(id, name, path)

GET /companies/:id/analytics

Get company analytics data

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: alexa_rank_chart, alexa_visitors_chart, facebook_likes_chart, twitter_tweets_chart, twitter_followers_chart, twitter_favorites_chart, growth_index_chart, similarweb_chart, app_downloads_chart, traffic, growth_stage, performance, momentum_rank, kpi_summary(id, last_update_date, users, paying_customers, volume, avg_price, ebitda, revenues, revenues_predictive, revenues_source, valuation, users_growth, yoy_growth, gross_margin, operating_margin, source, currency), exits(id, date, acquirors, target, total_ev, ev_ltm_sales, ev_ltm_ebitda), trading_multiples(id, categories, company_name, company_path, company_type, company_id, market_equity, market_firm, revenue_2015, revenue_2016, ebitda_2015, ebitda_2016)

GET /companies/updated

Retrieve companies list that was updated since any date

Parameter	Description
timestamp required integer	any date in past in Y-m-d H:i:s format Default: none
limit optional integer	Default: 10
offset optional integer	

GET /companies/:id/team

Retrieve company team members

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: name, url, images(32x32, 74x74, 100x100), title
limit	Default: 10
optional	
integer	
offset	
optional	
integer	

GET /companies/:id/news

Company newsfeed

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	<p>Comma-separated fields to return. Nested fields in brackets</p> <p>Example: id,name,path,images(32x32)</p> <p>Options: id, title, pub_date, summary, content, link, image, feed, author, categories(id, name), related_companies(id, name, path, type)</p>

GET /companies/:id/investors

Retrieve company investors

Parameter	Description
fields <div>optional</div> <div>string</div>	<p>Comma-separated fields to return. Nested fields in brackets</p> <p>Example: id,name,path,images(32x32)</p> <p>Options: id, name, path, url, images(32x32, 74x74, 100x100), exited</p>
limit <div>optional</div> <div>integer</div>	<p>Default: 10</p>
offset <div>optional</div> <div>integer</div>	

GET /companies/:id

Retrieve single company profile

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Default: return all fields by default Options: id, name, path, tagline, about, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, employees, twitter_followers, industries, growth_stage, traffic_summary, performance, total_growth, hq_locations, locations, tg_locations, client_focus, revenues, tags, delivery_method, launch_year, launch_month, total_funding, total_funding_source, last_funding, last_funding_source, company_status, facebook_likes_chart, alexa_rank_chart, twitter_tweets_chart, twitter_followers_chart, twitter_favorites_chart, growth_index_chart, app_downloads_chart, last_updated, kpi_valuation, kpi_revenues, kpi_currency, achievements, team(name, title, images), board_members(name), investors(id, name, images, exited, path), fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), media(type, file, thumb, description), traffic(visitors, annual_growth, sources, top_countries), similar(id, name, path)

GET /companies

Search for companies (filtered query)

24.03.17 Now you can filter or sort companies by last updated date. Also last_updated field added.

```
/companies?form_data=last_updated(2017-03-17 00:00:00)&sort=-last_updated
```

Parameter	Description
keyword optional string	keyword to search
form_data optional string	filter's values for search Example: locations(Western%20Europe),industries(charity)
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Default: id, name, path, images(32x32, 74x74, 100x100), tagline, hq_locations, growth_stage, employees, performance, traffic_summary, total_funding, last_updated Options: id, name, path, tagline, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, employees, twitter_followers, industries, growth_stage, traffic_summary, performance, total_growth, hq_locations, locations, tg_locations, client_focus, revenues, tags, delivery_method, launch_year, launch_month, total_funding, total_funding_source, last_funding, last_funding_source, company_status, last_updated, kpi_valuation, kpi_revenues, kpi_currency, achievements, team(name, title, images), board_members(name), investors(id, name, path, exited, images), fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), media(type, file, thumb, description), traffic(visitors, annual_growth, sources, top_countries), similar(id, name, path)
sort optional string	Options: name, industries, growth_stage, performance, locations, tg_locations, total_funding, achievements, tags, traffic_summary, last_funding_date, last_updated

POST /companies

Search for companies (bool query)

24.03.17 Now you can filter or sort companies by last updated date. Also last_updated field added.

```
-X POST /companies
-d '{
  "form_data": {
    "must": {
      "last_updated": "2016-12-10 00:00:00"
    }
  },
  "sort": "-last_updated"
}'
```

Parameter	Description
keyword <small>optional</small> <small>string</small>	keyword to search
form_data <small>optional</small> <small>array</small>	filter's values for search Example: {'must': {'locations': 'Western%20Europe'}, 'should': {'industries': 'charity'}, 'must_not': {}}
limit <small>optional</small> <small>integer</small>	Default: 10
offset <small>optional</small> <small>integer</small>	
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Default: id, name, path, images(32x32, 74x74, 100x100), tagline, hq_locations, growth_stage, employees, performance, traffic_summary, total_funding, last_updated Options: id, name, path, tagline, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, employees, twitter_followers, industries, growth_stage, traffic_summary, performance, total_growth, hq_locations, locations, tg_locations, client_focus, revenues, tags, delivery_method, launch_year, launch_month, total_funding, total_funding_source, last_funding, last_funding_source, company_status, last_updated, kpi_valuation, kpi_revenues, kpi_currency, achievements, team(name, title, images), board_members(name), investors(id, name, path, exited, images), fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), media(type, file, thumb, description), traffic(visitors, annual_growth, sources, top_countries), similar(id, name, path)
sort <small>optional</small> <small>string</small>	Options: name, industries, growth_stage, performance, locations, tg_locations, total_funding, achievements, tags, traffic_summary, last_funding_date, last_updated

GET /services

Retrieve mix of companies with "co-working" industry and funds-accelerators (filtered query).

Parameter	Description
<div>form_data</div> <div>optional</div> <div>string</div>	<div>filter's values for search</div> <div>Example: locations(Western%20Europe),industries(charity)</div>
<div>limit</div> <div>optional</div> <div>integer</div>	<div>Default: 10</div>
<div>offset</div> <div>optional</div> <div>integer</div>	
<div>fields</div> <div>optional</div> <div>string</div>	<div>Comma-separated fields to return. Nested fields in brackets</div> <div>Example: id,name,path,images(32x32)</div> <div>Options: id, name, text_type, path, tagline, images(32x32, 74x74, 100x100), url, website_url, hq_locations, locations, address(full_address, country, city, street, street_number, zip, lat, lon)</div>
<div>sort</div> <div>optional</div> <div>string</div>	<div>Options: name, locations</div>

GET /services/filters

Retrieve filters for services (filtered query).

When you make a companies search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

Parameter	Description
hash optional string	hash string received from /investors
form_data optional string	filter's values for search Example: locations(Western%20Europe),industries(charity)
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: hq_locations(name, count, active), locations, type(name, active)

GET /countries/:id

Get country data

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, name, total_recent_fundings, total_recent_fundings_source, one_month_fundings, one_month_fundings_source, companies_count, fundings_count, leaders(id, name, url, images, path), rising_stars(id, name, url, images, path), active_funds(id, name, url, images, path), recent_fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), news

GET /countries/:id/recent_fundings

Retrieve country last funding rounds

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: company(id, name, tagline, images, industries, growth_stage, hq_locations, locations, tg_locations, traffic_summary, performance, total_funding, total_funding_source), year, month, amount, amount_source, currency, round, investors(id, name, path), unknown_investors
sort optional string	Options: name, total_funding, recent_funding, performance, date, traffic_summary

GET /countries/:id/rising_stars

Retrieve country rising stars

Parameter	Description
limit <small>optional</small> <small>integer</small>	Default: 10
offset <small>optional</small> <small>integer</small>	
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, url, tagline, industries, images(32x32, 74x74, 100x100), hq_locations, locations, tg_locations, growth_stage, performance, traffic_summary, total_funding, total_funding_source
sort <small>optional</small> <small>string</small>	Options: name, total_funding, performance, traffic_summary

GET /countries/:id/news

Retrieve country news

Parameter	Description
limit	Default: 10
optional	
integer	
offset	
optional	
integer	
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, title, pub_date, link, feed, related_companies(id, name, path)

GET /countries/:id/leaders

Retrieve country leader companies

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, url, tagline, industries, images(32x32, 74x74, 100x100), hq_locations, locations, tg_locations, growth_stage, performance, total_funding, total_funding_source, traffic_summary
sort optional string	Options: name, total_funding, performance, traffic_summary

GET /countries/:id/active_funds

Retrieve country most active funds

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, url, images(32x32, 74x74, 100x100), tagline, locations, hq_locations, deal_size, investment_stages, recent_funding, recent_funding_source, total_funding, total_funding_source, investments(id, name, path)
sort optional string	Options: name, total_funding, recent_funding, investments

GET /countries

Retrieve countries list with common data

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, total_recent_fundings, total_recent_fundings_source, one_month_fundings, one_month_fundings_source, companies_count, fundings_count, leaders(id, name, path), active_funds(id, name, path), rising_stars(id, name, path)
sort optional string	Options: name, total_recent_fundings, one_month_fundings

GET /composite/filters

Retrieve filters for composite search endpoint (filtered query).

When you make a composite search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

Parameter	Description
hash optional string	hash string received from /composite
form_data optional string	filter's values for search Example: locations(Western%20Europe),industries(charity)
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: object_type(name, count, active), industries(name, count, active), growth_stages(name, count, active), locations, hq_locations(name, count, active), performance(name, count, active), fundings(name, count, active)

GET /composite

Retrieve composite search for different object types, such as companies or funds for example. You can use object_type filter field to get required object type and it will work, but when you will use any other filters results for companies will be returned. Counters for object_type are always null.

Parameter	Description
keyword optional string	keyword to search
form_data optional string	filter's values for search Example: locations(Western%20Europe),industries(charity)
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, object_type, name, path, tagline, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, employees, twitter_followers, industries, growth_stage, traffic_summary, performance, hq_locations, locations, tg_locations, client_focus, revenues, tags, delivery_method, launch_year, launch_month, total_funding, total_funding_source, last_funding, last_funding_source, achievements, team(name, title, images), board_members(name), investors(id, name, images, exited, path), fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), media(type, file, thumb, description), traffic(visitors, annual_growth, sources, top_countries), similar(id, name, path)
sort optional string	Options: name

GET /industries/:id/recent_fundings

Retrieve country last funding rounds

Parameter	Description
limit <small>optional</small> <small>integer</small>	Default: 10
offset <small>optional</small> <small>integer</small>	
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: company(id, name, tagline, images, industries, growth_stage, hq_locations, locations, tg_locations, traffic_summary, performance, total_funding, total_funding_source), year, month, amount, amount_source, currency, round, investors(id, name), unknown_investors
sort <small>optional</small> <small>string</small>	Options: name, total_funding, recent_funding, performance, date, traffic_summary

GET /industries/:id/rising_stars

Retrieve industry rising stars

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, url, tagline, industries, images(32x32, 74x74, 100x100), hq_locations, locations, tg_locations, growth_stage, performance, traffic_summary, total_funding, total_funding_source
sort optional string	Options: name, total_funding, performance, traffic_summary

GET /industries/:id/news

Retrieve industry news

Parameter	Description
limit	Default: 10
optional	
integer	
offset	
optional	
integer	
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, title, pub_date, link, feed, related_companies(id, name, path)

GET /industries/:id/leaders

Retrieve industry leader companies

Parameter	Description
limit	Default: 10
optional	
integer	
offset	
optional	
integer	
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, name, path, url, tagline, industries, images(32x32, 74x74, 100x100), hq_locations, locations, tg_locations, growth_stage, performance, total_funding, total_funding_source, traffic_summary
sort	Options: name, total_funding, performance, traffic_summary
optional	
string	

GET /industries/:id/active_funds

Retrieve industry most active funds

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	<p>Comma-separated fields to return. Nested fields in brackets</p> <p>Example: id,name,path,images(32x32)</p> <p>Options: id, name, path, url, images(32x32, 74x74, 100x100), tagline, hq_locations, locations, deal_size, investment_stages, recent_funding, recent_funding_source, total_funding, total_funding_source, investments(id, name, path)</p>
sort optional string	Options: name, total_funding, recent_funding, investments

GET /industries/:id

Retrieve industry data

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, name, total_recent_fundings, total_recent_fundings_source, one_month_fundings, one_month_fundings_source, companies_count, dutch_companies_count, fundings_count, leaders(id, name, url, images, path), rising_stars(id, name, url, images, path), active_funds(id, name, url, images, path), recent_fundings(year, month, amount, amount_source, currency, round, investors, unknown_investors), news

GET /industries

Retrieve industries list with common data

Parameter	Description
limit optional integer	Default: 10
offset optional integer	
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, total_recent_fundings, total_recent_fundings_source, one_month_fundings, one_month_fundings_source, companies_count, dutch_companies_count, fundings_count, leaders(id, name, path), active_funds(id, name, path), rising_stars(id, name, path)
sort optional string	Options: name, total_recent_fundings, one_month_fundings

GET /investors

Search for investors (filtered query)

24.03.17 Now you can filter or sort investors by last updated date. Also last_updated field added.

```
/investors?form_data=last_updated(2017-03-17 00:00:00)&sort=-last_updated
```

Parameter	Description
keyword <small>optional</small> <small>string</small>	keyword to search
form_data <small>optional</small> <small>string</small>	filter's values for search Example: locations(Western%20Europe),industries(charity)
limit <small>optional</small> <small>integer</small>	Default: 10
offset <small>optional</small> <small>integer</small>	
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Default: id, name, path, images(32x32, 74x74, 100x100), tagline, hq_locations, investment_stages, employees, total_funding, last_updated Options: id, name, path, tagline, investor_type, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, investment_stages, employees, tg_industries, hq_locations, locations, tg_locations, deal_size, industry_experience, country_experience, client_focus, tags, tg_revenues, deal_structure, total_funding, total_funding_source, recent_funding, recent_funding_source, last_funding, last_funding_source, investments_num, top_investments_num, dutch_investments_num, investor_activity_rank, investor_performance_rank, last_updated, team(name, title), board_members(name), media(type, file, thumb, description), fundings(company, year, month, amount, amount_source, currency, round, investors, unknown_investors), investments(id, name, path), co_investors(id, name, path), similar(id, name, path)
sort <small>optional</small> <small>string</small>	Options: name, investment_stages, tg_industries, locations, tg_locations, industry_experience, client_focus, tags, tg_revenues, total_funding, recent_funding, last_updated

POST /investors

Search for investors (bool query)

24.03.17 Now you can filter or sort investors by last updated date. Also last_updated field added.

```
-X POST /investors
-d '{
  "form_data": {
    "must": {
      "last_updated": "2016-12-10 00:00:00"
    }
  },
  "sort": "-last_updated"
}'
```

Parameter	Description
keyword <small>optional</small> <small>string</small>	keyword to search
form_data <small>optional</small> <small>array</small>	filter's values for search Example: {'must': {'locations': 'Western%20Europe'}, 'should': {'industries': 'charity'}, 'must_not': {}}
limit <small>optional</small> <small>integer</small>	Default: 10
offset <small>optional</small> <small>integer</small>	
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Default: id, name, path, images(32x32, 74x74, 100x100), tagline, hq_locations, investment_stages, employees, total_funding, last_updated Options: id, name, path, tagline, investor_type, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, investment_stages, employees, tg_industries, hq_locations, locations, tg_locations, deal_size, industry_experience, country_experience, client_focus, tags, tg_revenues, deal_structure, total_funding, total_funding_source, recent_funding, recent_funding_source, last_funding, last_funding_source, investments_num, top_investments_num, dutch_investments_num, investor_activity_rank, investor_performance_rank, last_updated, team(name, title), board_members(name), media(type, file, thumb, description), fundings(company, year, month, amount, amount_source, currency, round, investors, unknown_investors), investments(id, name, path), co_investors(id, name, path), similar(id, name, path)
sort <small>optional</small> <small>string</small>	Options: name, investment_stages, tg_industries, locations, tg_locations, industry_experience, client_focus, tags, tg_revenues, total_funding, recent_funding, last_updated

GET /investors/:id

Retrieve single company profile

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Default: return all fields by default Options: id, name, path, tagline, about, investor_type, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), address, investment_stages, employees, tg_industries, hq_locations, locations, tg_locations, deal_size, industry_experience, country_experience, client_focus, tags, tg_revenues, deal_structure, total_funding, total_funding_source, recent_funding, recent_funding_source, last_funding, last_funding_source, investments_num, top_investments_num, dutch_investments_num, investor_activity_rank, investor_performance_rank, last_updated, team(name, title, images), board_members(name), media(type, file, thumb, description), fundings(company, year, month, amount, amount_source, currency, round, investors, unknown_investors), investments(id, name, path), co_investors(id, name, path), similar(id, name, path)

GET /investors/:id/similar

Retrieve similar investors for investor

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, url, images(32x32, 74x74, 100x100), address, tagline, hq_locations, locations, deal_size, investment_stages, tg_locations, score
limit optional integer	Default: 10
offset optional integer	
sort optional string	Options: name, locations

GET /investors/filters

Retrieve filters for investors (filtered query).

When you make a companies search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

24.03.17 Now you can filter or sort investors by last updated date. Also last_updated field added.

```
/companies?form_data=last_updated(2017-03-17 00:00:00)&sort=-last_updated
```

This filter has no buckets, just key and current value.

Parameter	Description
hash <div>optional</div> <div>string</div>	hash string received from /investors
form_data <div>optional</div> <div>string</div>	filter's values for search Example: locations(Western%20Europe),industries(charity)
fields <div>optional</div> <div>string</div>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: deal_structure(name, count, active), industry_experience(name, count, active), country_experience(name, count, active), tg_revenues(name, count, active), investor_type(name, count, active), tg_industries(name, count, active), achievements(name, count, active), tg_tags(name, count, active), locations, hq_locations(name, count, active), tg_locations(name, count, active), investment_stages(name, count, active), investments_num(name, count, active), investor_activity_rank(name, count, active), investor_performance_rank(name, count, active), last_updated

POST /investors/filters

Retrieve filters for investors (bool query).

When you make a companies search request, filter's hash key will be returned that pointed to current search request filters. You can use this hash key or form_data formatted string. Filters, associated with a hash key stored for 5 minutes only.

Form data must be encoded according RFC 3986 standart.

Note: you can specify only one form_data or hash. Hash has higher priority than form_data.

24.03.17 Now you can filter or sort investors by last updated date. Also last_updated field added.

```
-X POST /investors
-d '{
  "form_data": {
    "must": {
      "last_updated": "2016-12-10 00:00:00"
    }
  },
  "sort": "-last_updated"
}'
```

This filter has no buckets, just key and current value.

Parameter	Description
hash <small>optional</small> <small>string</small>	hash string received from /investors
form_data <small>optional</small> <small>array</small>	filter's values for search Example: {'must': {'locations': 'Western%20Europe'}, 'should': {'industries': 'charity'}, 'must_not': {}}
fields <small>optional</small> <small>string</small>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: deal_structure(name, count, active), industry_experience(name, count, active), country_experience(name, count, active), tg_revenues(name, count, active), investor_type(name, count, active), tg_industries(name, count, active), achievements(name, count, active), tg_tags(name, count, active), locations, hq_locations(name, count, active), tg_locations(name, count, active), investment_stages(name, count, active), investments_num(name, count, active), investor_activity_rank(name, count, active), investor_performance_rank(name, count, active), last_updated

GET /investors/:id/board_members

Get investor board members

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: name, url, images(32x32, 74x74, 100x100)
limit optional integer	Default: 10
offset optional integer	

GET /investors/:id/media

Retrieve investor media files

Media files types:

- **vimeo** - vimeo video
- **youtube** - youtube video
- **slideshare** - slideshare presentation
- **image** - image file
- **ppt** - ppt/pptx presentation file
- **pdf** - pdf file
- **doc** - doc/docx file
- **vimeo** - vimeo video

For video, youtube and slideshare types file field contains item ID in coincident service. image, ppt, pdf and doc types file field contains link to original file. This types do not have thumbs.

Parameter	Description
fields <div>optional<div>string</div></div>	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: type, file, thumb, description
limit <div>optional<div>integer</div></div>	Default: 10
offset <div>optional<div>integer</div></div>	

GET /investors/:id/fundings

Retrieve investor funding rounds

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: company(id, name), year, month, amount, amount_source, currency, round, investors(id, name), unknown_investors
limit optional integer	Default: 10
offset optional integer	

GET /investors/batch

Get batch investors by ids

Parameter	Description
ids	comma-separated companies ids (int, not strings urls, 50 max)
required	
string	
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: id, name, path, tagline, about, investor_type, url, website_url, twitter_url, facebook_url, linkedin_url, google_url, crunchbase_url, angellist_url, playmarket_app_id, appstore_app_id, images(32x32, 74x74, 100x100), investment_stages, employees, tg_industries, hq_locations, tg_locations, deal_size, industry_experience, country_experience, client_focus, tags, tg_revenues, deal_structure, total_funding, total_funding_source, recent_funding, recent_funding_source, last_funding, last_funding_source, investments_num, top_investments_num, dutch_investments_num, investor_activity_rank, investor_performance_rank, team(name, title, images), board_members(name), media(type, file, thumb, description), fundings(company, year, month, amount, amount_source, currency, round, investors, unknown_investors), investments(id, name, path), co_investors(id, name, path), similar(id, name, path)

GET /investors/:id/co_investors

Get investor co-investors

Parameter	Description
fields optional string	Comma-separated fields to return. Nested fields in brackets Example: id,name,path,images(32x32) Options: id, name, path, tagline, url, images(32x32, 74x74, 100x100), co_investments(id, name), investment_stages, locations
limit optional integer	Default: 10
offset optional integer	

GET /investors/updated

Retrieve companies list that was updated since any date

Parameter	Description
timestamp required integer	any date in past in Y-m-d H:i:s format Default: none
limit optional integer	Default: 10
offset optional integer	

GET /investors/:id/team

Retrieve company team members

Parameter	Description
fields	Comma-separated fields to return. Nested fields in brackets
optional	Example: id,name,path,images(32x32)
string	Options: name, url, images(32x32, 74x74, 100x100), title
limit	Default: 10
optional	
integer	
offset	
optional	
integer	

GET /investors/:id/news

Investor newsfeed

Parameter	Description
limit <small>optional</small> <small>integer</small>	Default: 10
offset <small>optional</small> <small>integer</small>	
fields <small>optional</small> <small>string</small>	<p>Comma-separated fields to return. Nested fields in brackets</p> <p>Example: id,name,path,images(32x32)</p> <p>Options: id, title, pub_date, summary, content, link, image, feed, author, categories(id, name), related_companies(id, name, path, type)</p>

POST /investors/:id/investments

Retrieve investor investments

Parameter	Description
fields optional string	<p>Comma-separated fields to return. Nested fields in brackets</p> <p>Example: id,name,path,images(32x32)</p> <p>Options: id, name, path, url, images(32x32, 74x74, 100x100), tagline, hq_locations, locations, traffic_summary, traffic(visitors, annual_growth, sources, top_countries), performance, total_funding, total_funding_source, exited, industries, growth_stage</p>
limit optional integer	<p>Default: 10</p>
offset optional integer
